

SOLAR + STORAGE PLUG & PLAY TECHNOLOGY

CRAFTSTROM BROCHURE

CraftStrom technology uses your existing house wiring and sends the power through standard power outlets to your appliances!

It doesn't get any easier than this! – Produce your own Electricity – Lower your monthly electricity bill.

Solar Kits

- **Semi-Flexible** and **Bi-Facial** or **Glass Bi-Facial**
- 400 Watt Panels & 400 Watt Inverter & Power Meter.
- Solar Production will throttle if over production is higher than usage – We never feed onto the utility Grid, unless wanted.

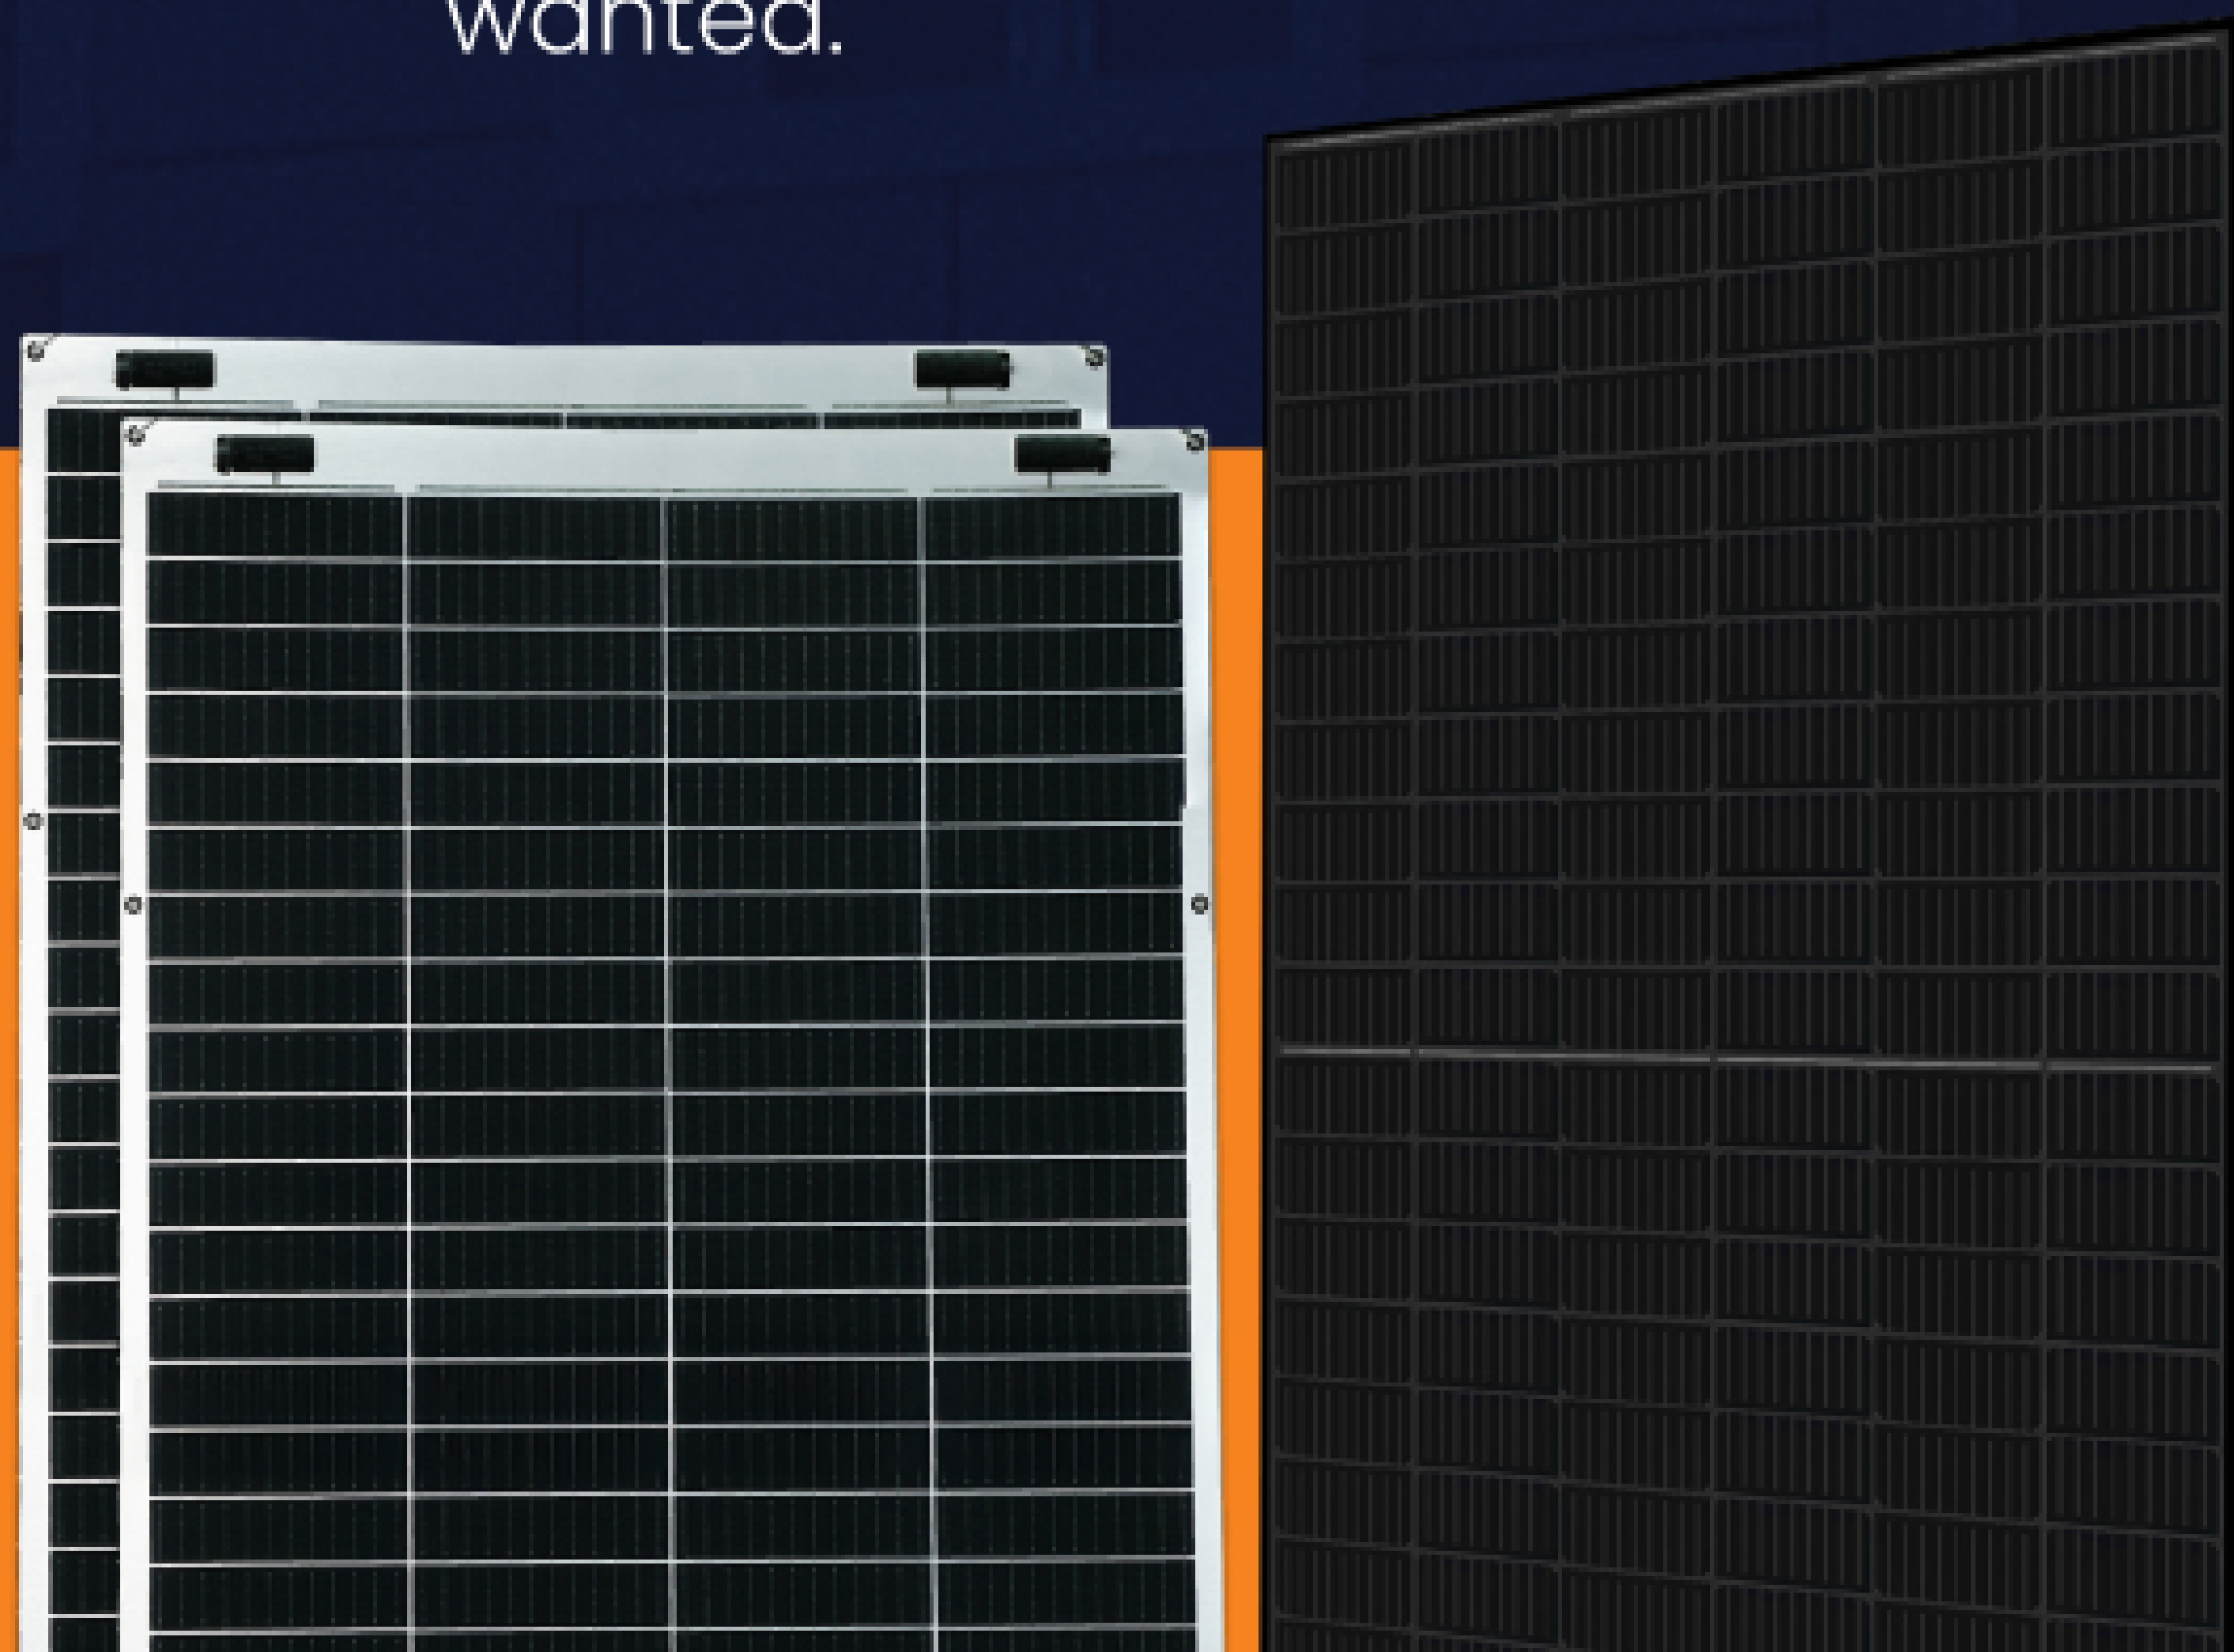

Battery

- On-grid and Off-grid capabilities.
- Safe LiFePO4 cell with up to 10,000 charges cycles.
- No Cobalt used in Cells!
- 1kWh to 4kWh per battery set.

Power Meter

- Measures how much power you are pulling from the utility.
- Allows the Solar Kit to produce as much as possible to cover that amount.
- It will never over produce and therefore will never send power to the utility!

Meet the smart inverter

CraftStrom inverters offer a safe and versatile way to bring solar power directly into your home without the hassle of lengthy, complicated, or costly installations. Designed for maximum efficiency, our inverters ensure zero-export functionality by dynamically adjusting power output to meet your home's needs.

Our inverters feature dual communication modes for added safety and reliability: WiFi for app-based monitoring and MHz communication for seamless coordination between devices. This ensures accurate energy balancing, even if WiFi is temporarily unavailable.

Safety First:

CraftStrom products are UL 1741 certified, a critical safety standard in the U.S., ensuring they automatically disconnect from power in emergencies. This rapid shutdown—within milliseconds—protects linemen, fire marshals, and other first responders. With over five years of experience in plug-and-play solar solutions and a global footprint, CraftStrom delivers unmatched safety and reliability that sets us apart from competing micro inverter

The added safety measures include:

Radio Testing (EN 300328 v2.2.2), including:

- spot check testing on radiated spurious emissions

Electromagnetic Compatibility Testing, including:

Immunity tests according EN IEC 55014-2:2021

Emission tests according EN IEC 61000-6-3:2021

EN 61000-4-5:2014 + A1:2017 + COR1 Immunity to Surge

EN 55016-2-1:2014 + A1:2017 Conducted disturbance measurements (150 kHz - 30 MHz)

EN 55016-2-3:2017 + A1:2019 Radiated disturbance measurements (30 MHz - 1 GHz)

EN 55016-2-3:2017 + A1:2019 Radiated disturbance measurements (1 GHz - 6 GHz)

Electrical Safety Testing (IEC 62109-1 / IEC 62109-2), including:

- Dielectrical strength tests
- Touch current measurements
- Creepage and clearance distance measurements on PCBs
- Relay tests
- Blanketing tests

Meet the mounting hardware

We can offer 2 types of hardware kits to mount glass panels on balconies or fences.

1. Balcony mount that holds the panels flat

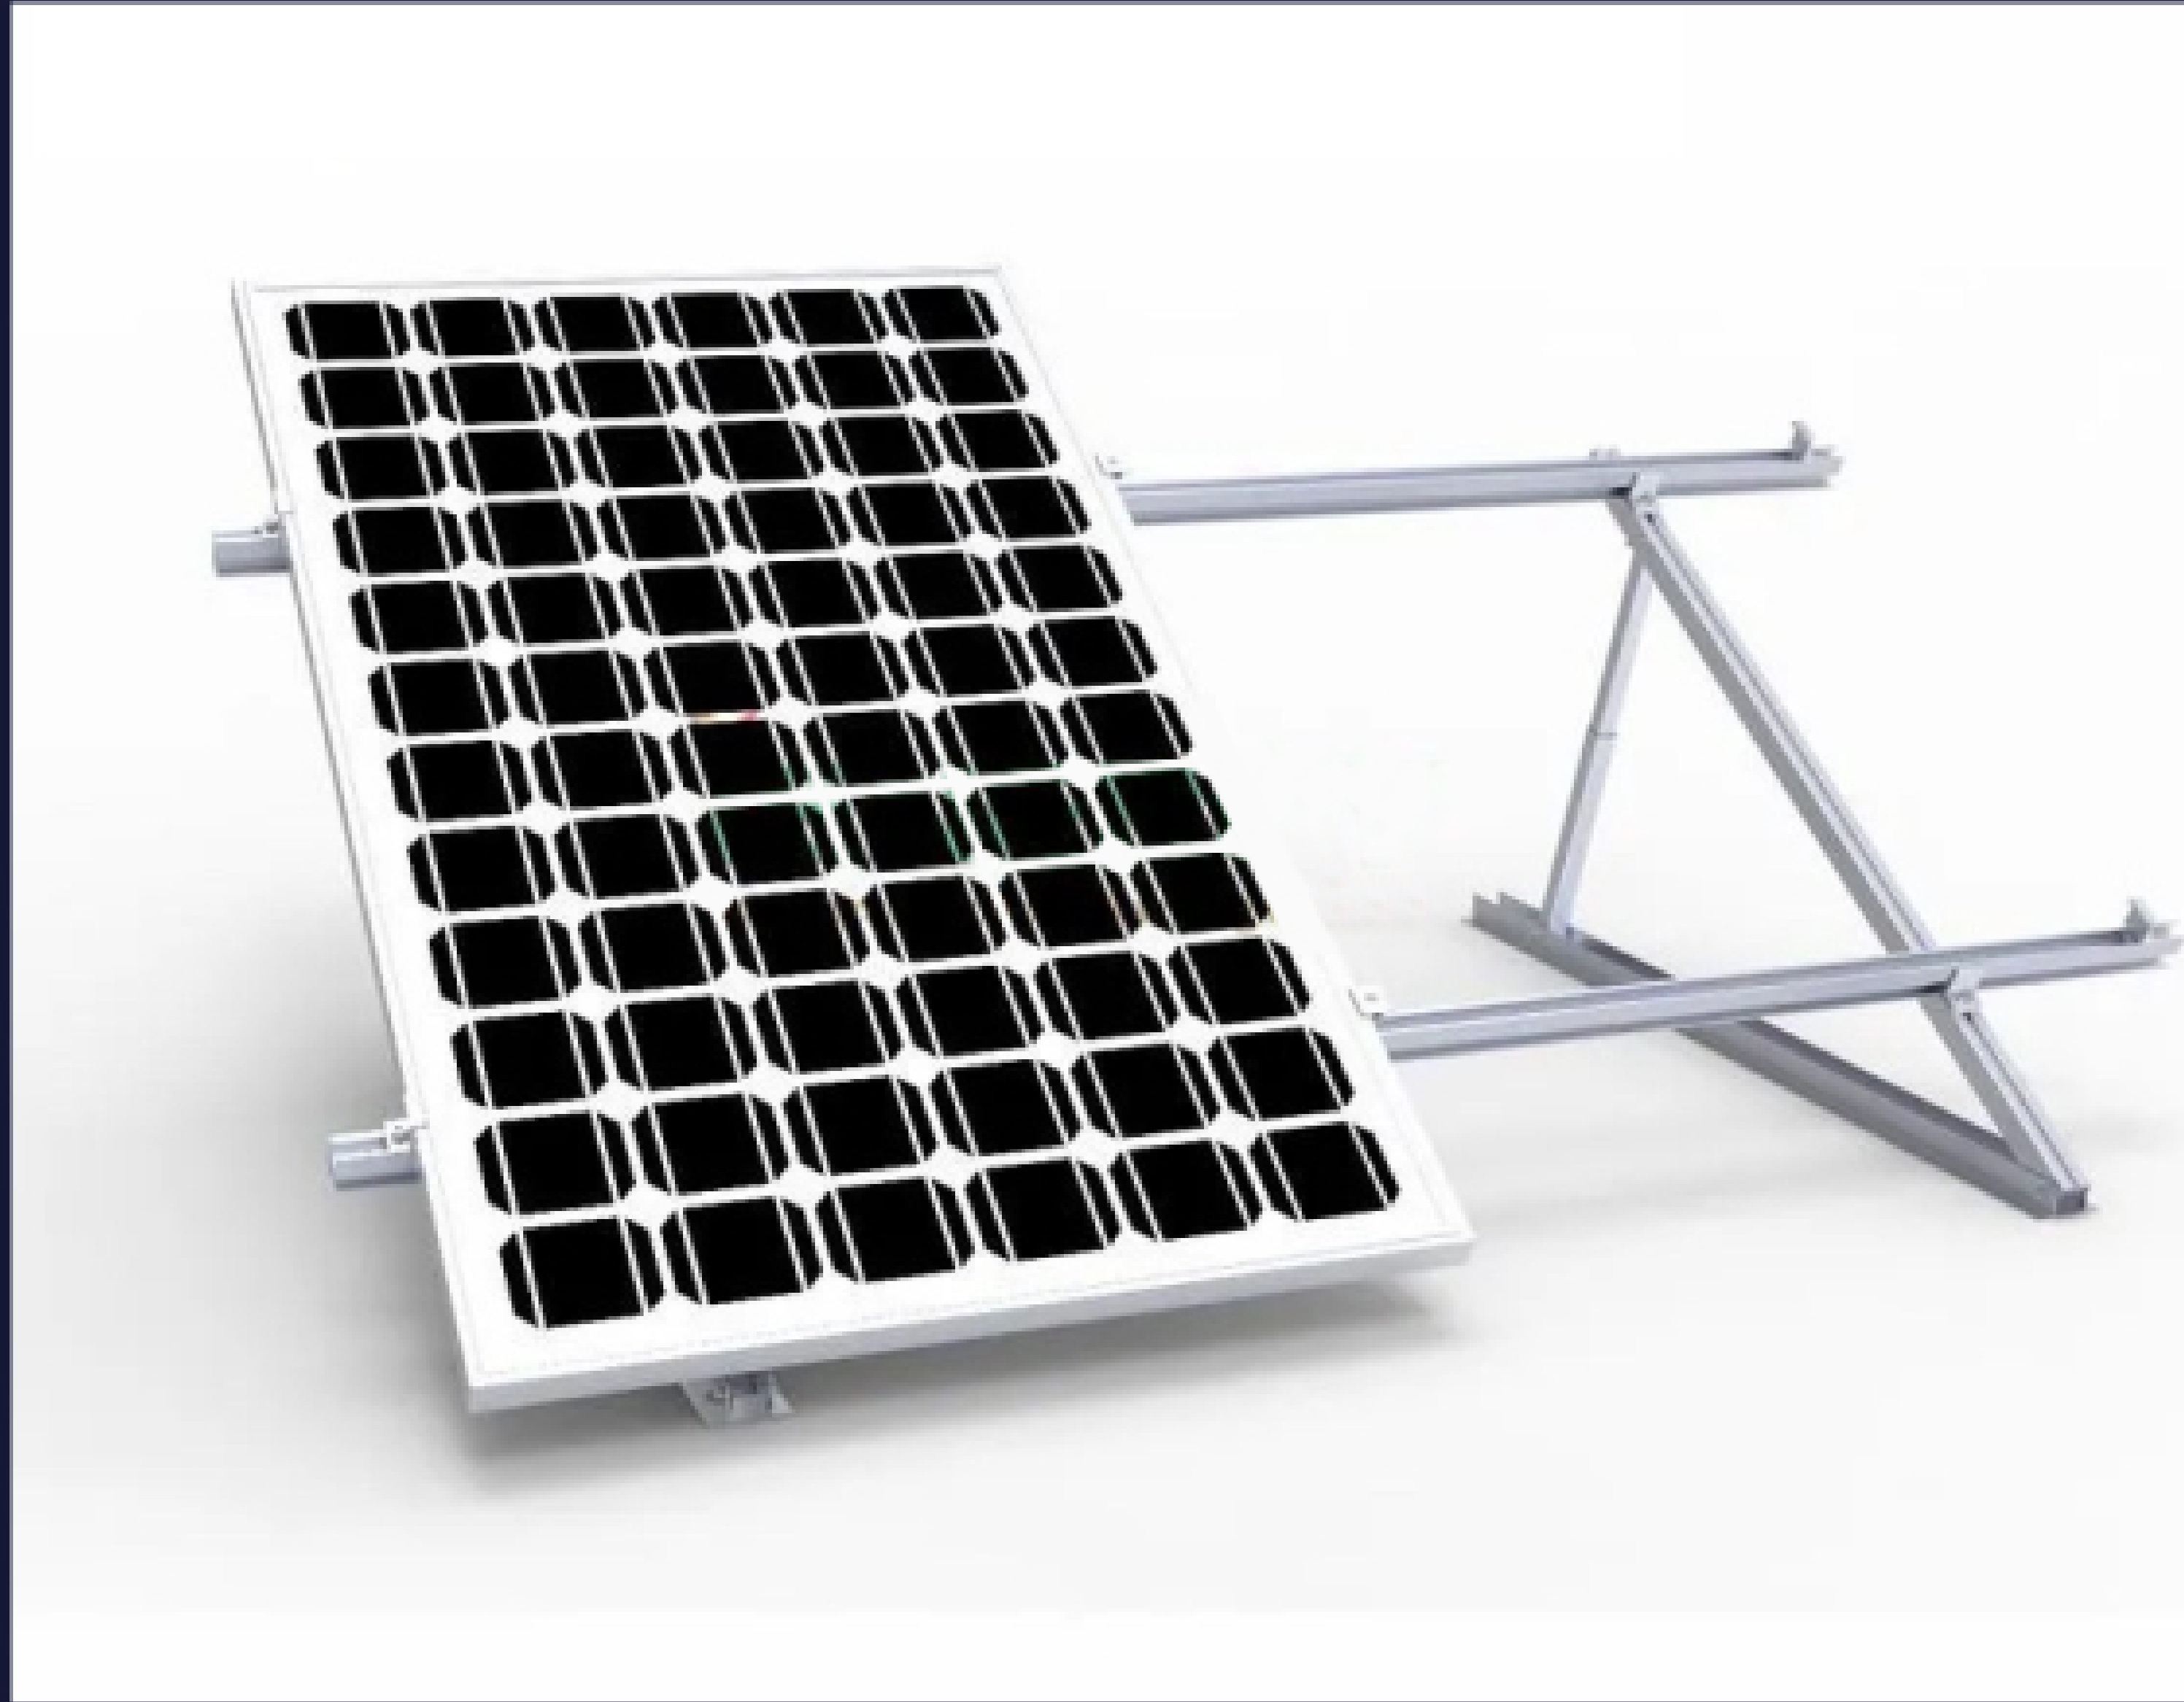

2. Balcony/Fence mount that holds the panels at an angle - Adjustable angle 20-30 deg.

Meet the mounting hardware

3. Balcony/Fence mount that holds the panels at an angle – Adjustable angle 20-40 deg.

How it works?

Choose

- Choose: \$900 to \$10,000.
- Complete Solar + Battery Kit.
- Solar Only.

Plug-In

- Order will arrive via FedEx in a week.
- Unboxing and setup takes no longer than 15-minutes.

Produce

- The CraftStrom app allows you to see what your solar panels are producing.
- The app has integrated AI to assist with recharging your battery with solar and discharging to minimizing grid pull.

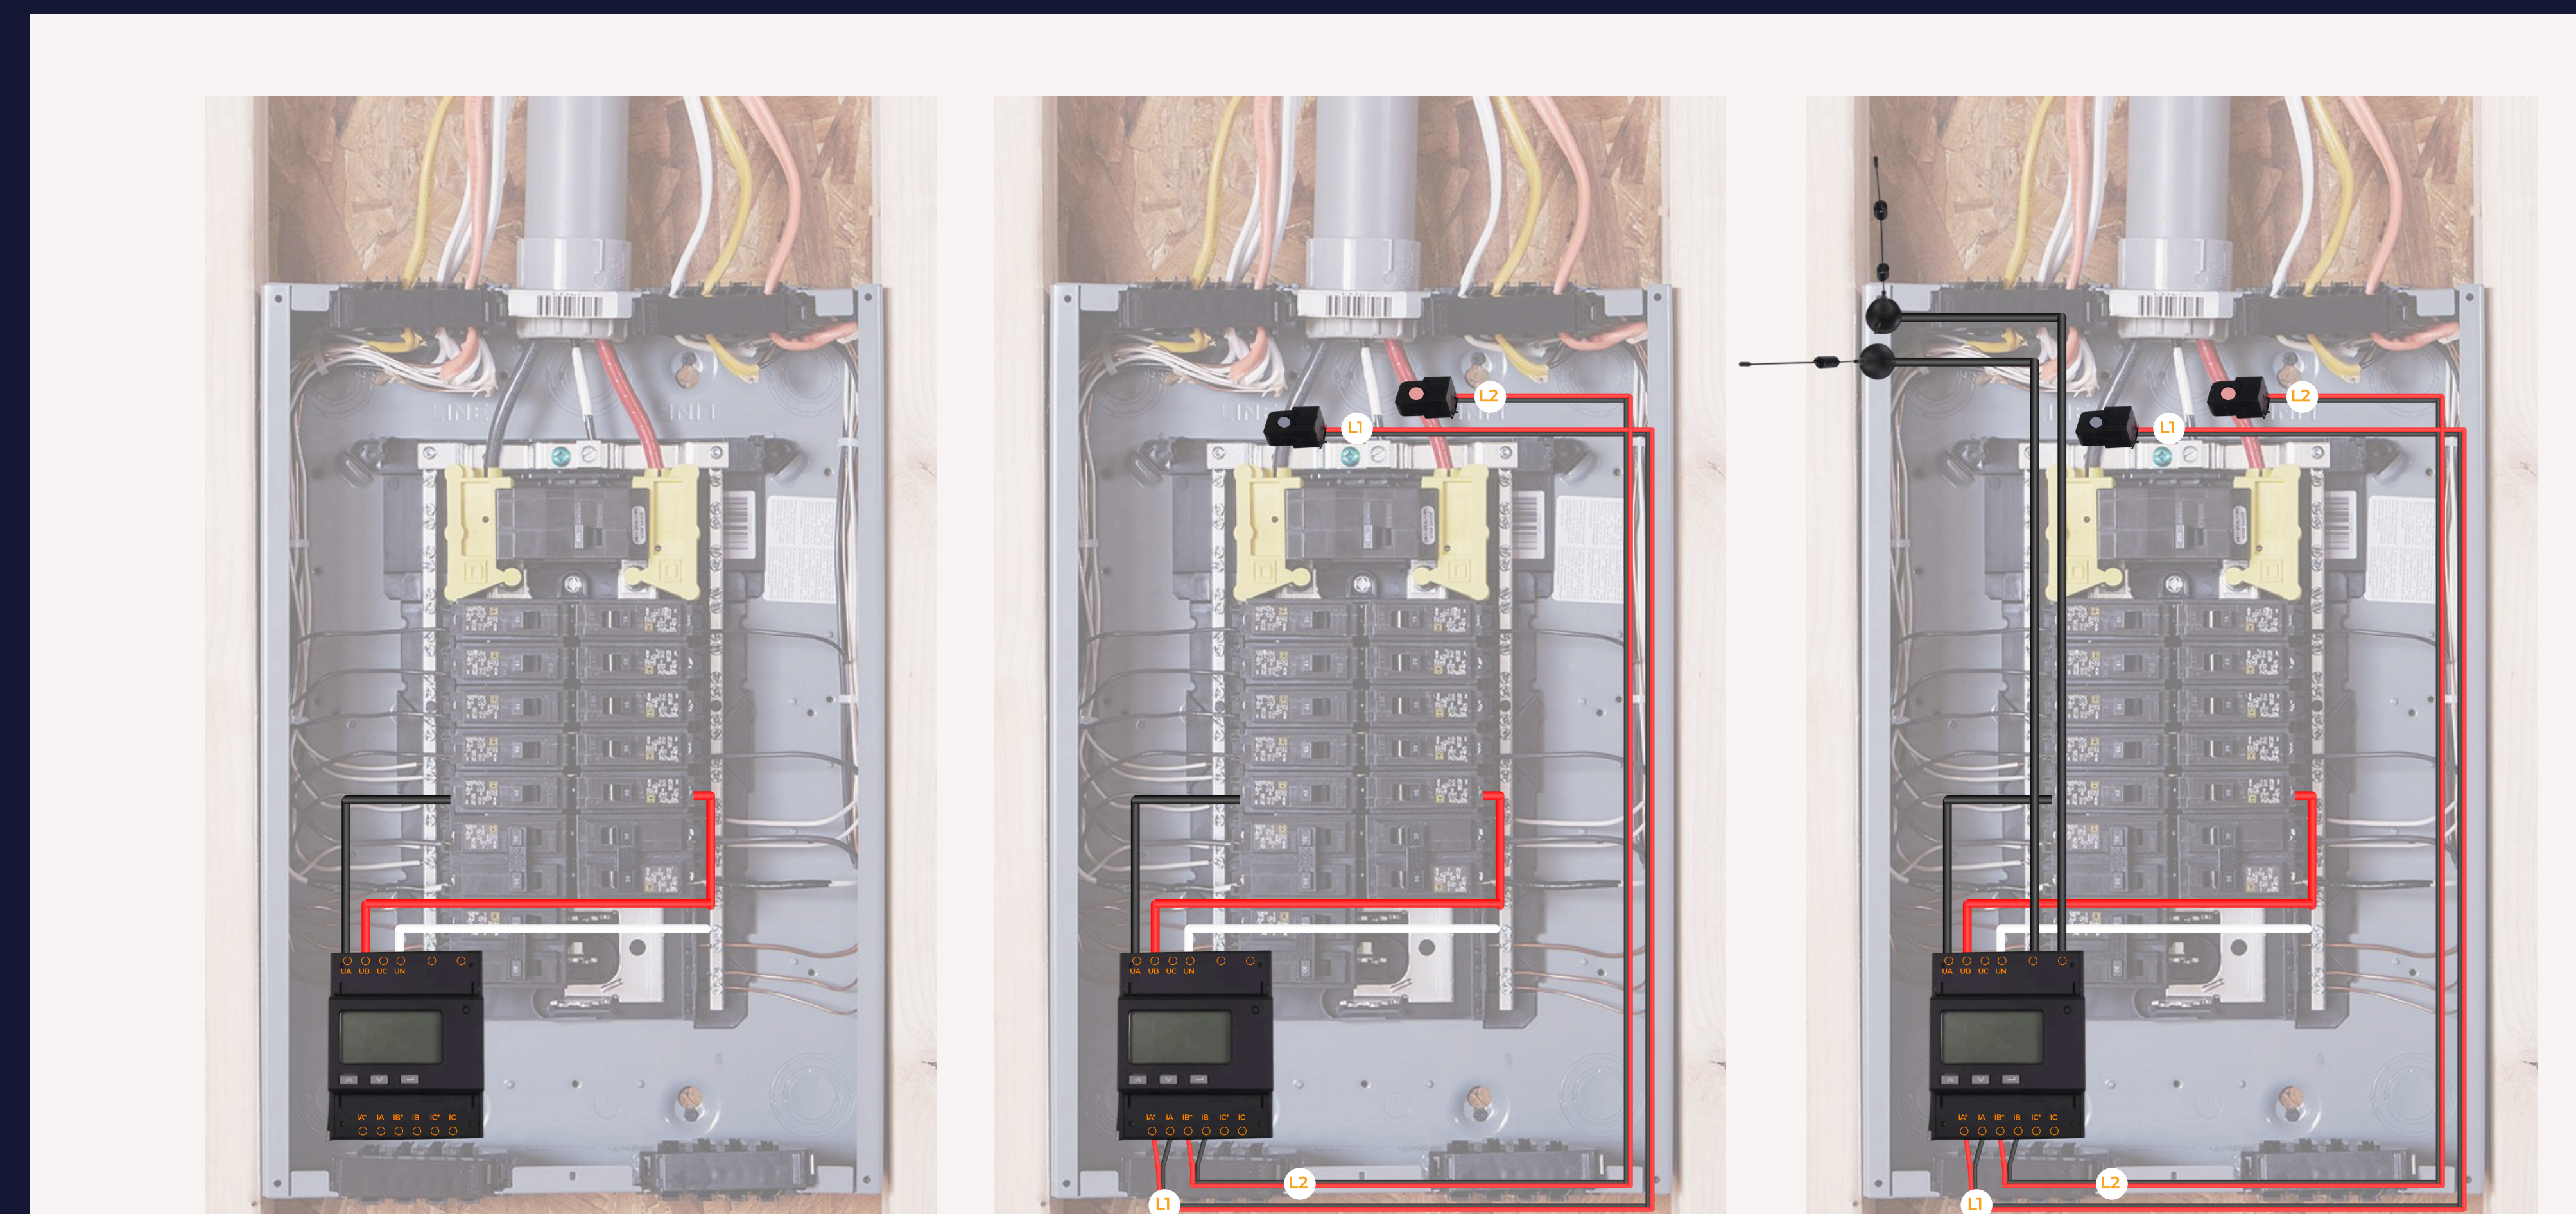

Store

- The battery can be controlled manually to take advantage of time of use energy plans such as "free nights" or "free weekends".

Meet the smart solar kits

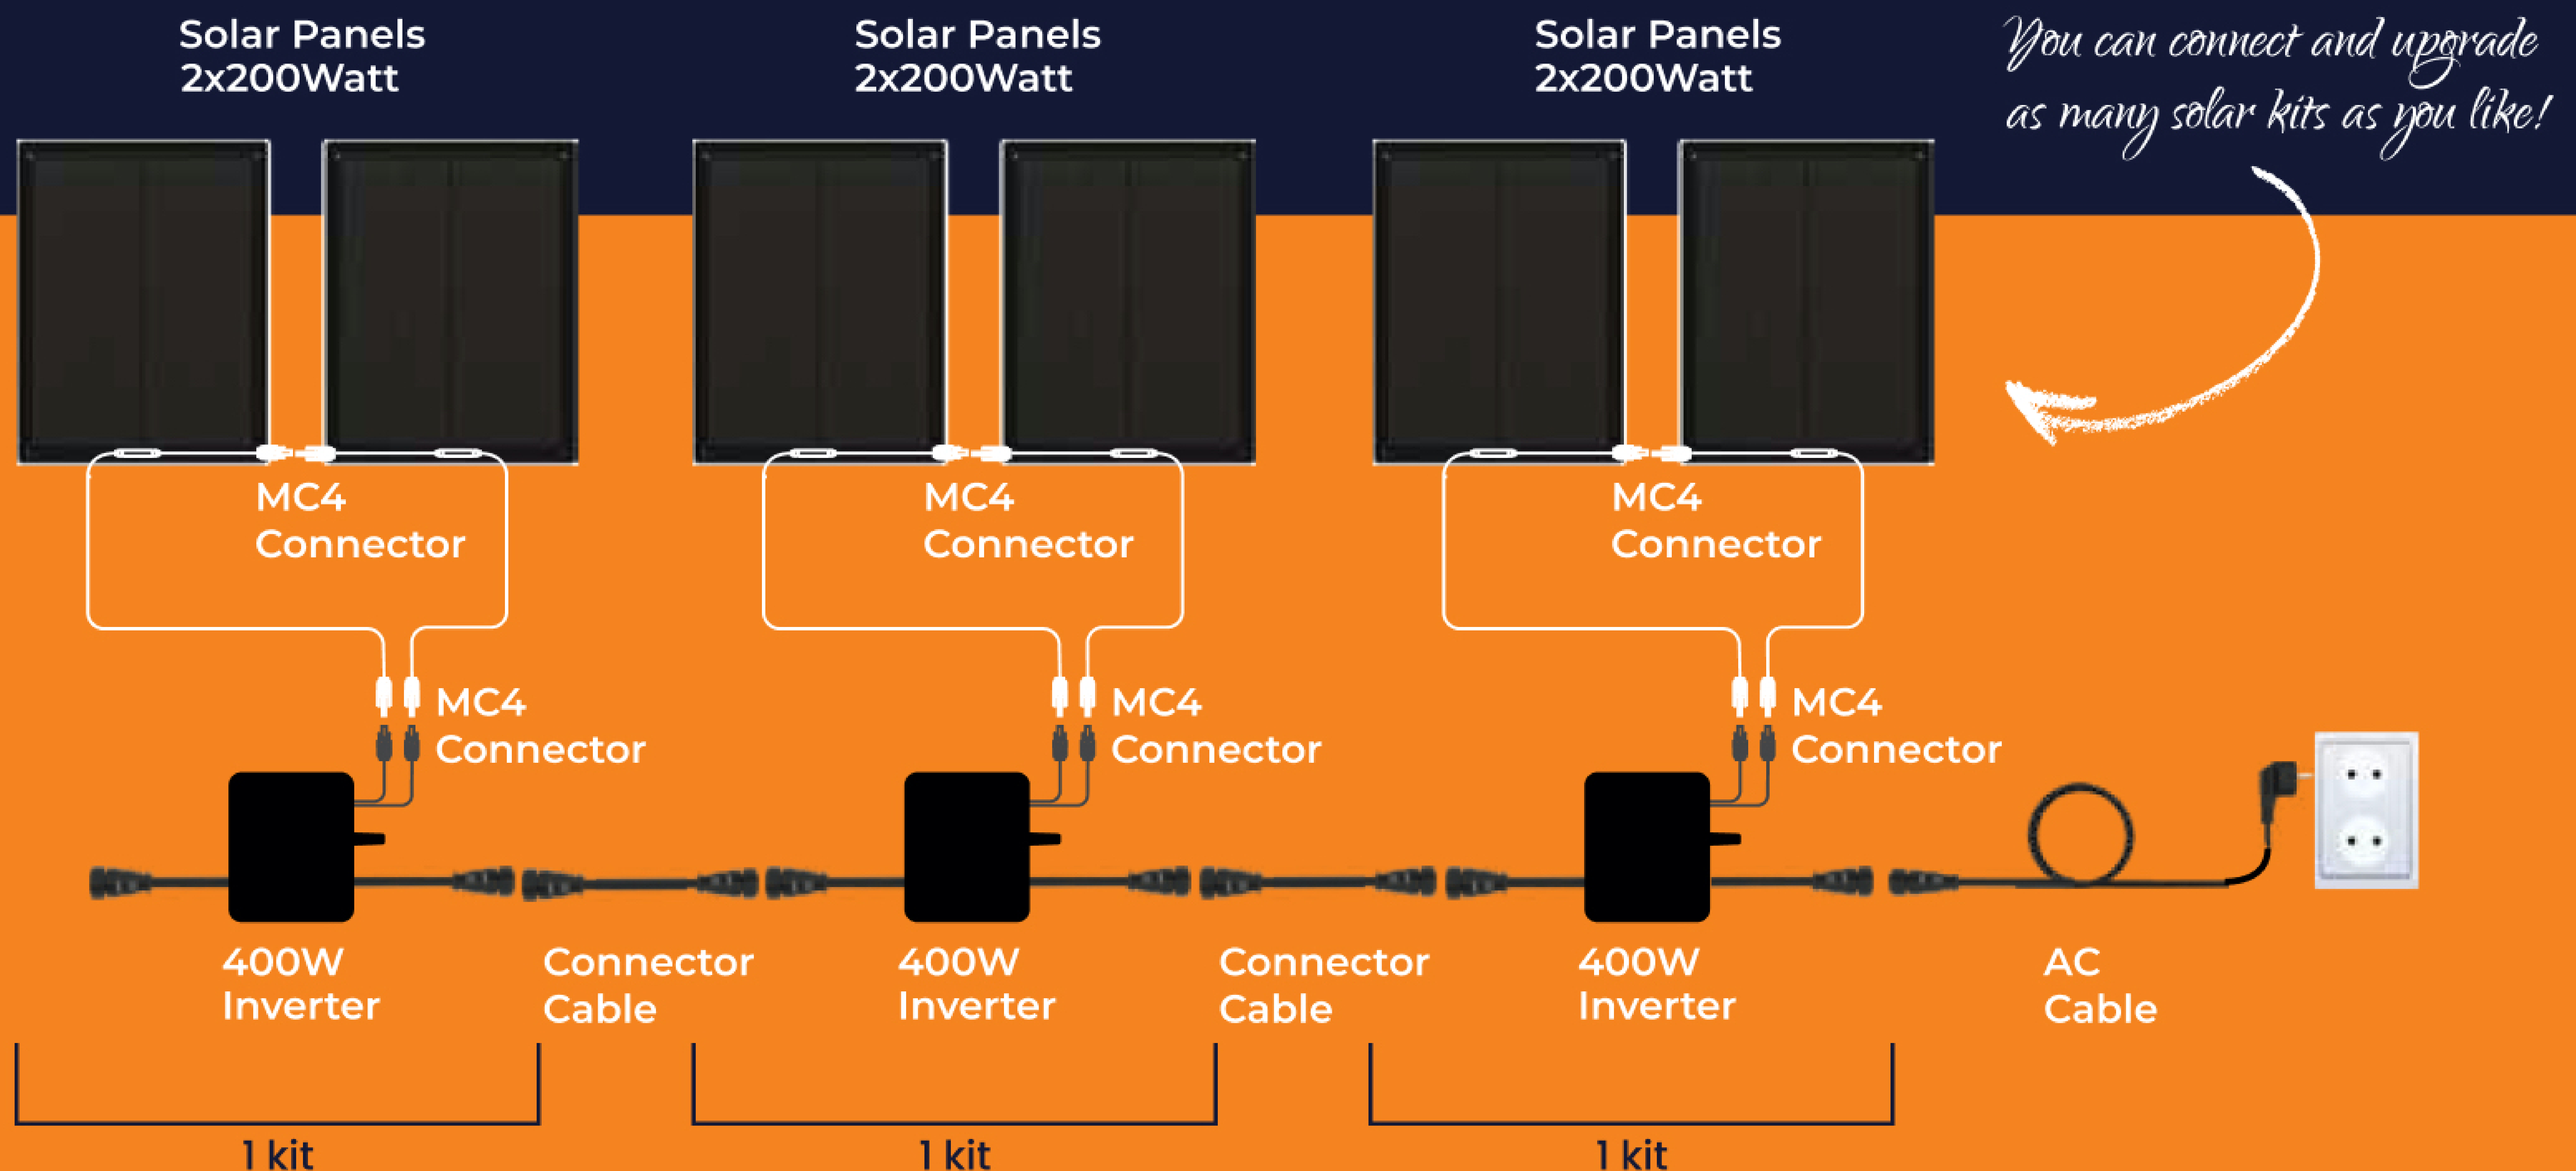

- Ultra thin Panels with Smart Inverter & Power Meter.
- Flexible solar panels with aluminum frame and stands for easy install
- Completely Modular, in steps of 400Watt
400W - 800W - 1200W - 1600W - 2000W
- All of our Panels undergo a rigorous testing procedure before being shipped to the customer. Power output is measured and the panel is x-rayed to assure all cells and leads are in tact!
- We use our proven and proprietary material mix for extreme longevity. Ultra Thick ETFE Layer and many other materials are used.
- PowerMeter measures power from utility and throttles Power output of Smart Solar to never feed back to utility! This allows for accurate zero-export.
- Most accurate energy balancing system, with reaction time of 0.1 seconds between PowerMeter and other smart components.
- Designed for the everyday homeowner or renter who doesn't want to be susceptible to the unstable energy economies.

How it works?

How to wire up the modular Solar Panel Kit

The example below shows 3 x 400W Solar kits consisting of 2x 200W Panels, one MicroInverter and the necessary wiring.

Meet the battery

- Smart at home and mobile for all other instances
- In constant data exchange with Solar System and Power Meter for efficient use of power
- MPPT charge controller in each battery – assign batteries for emergencies
- Aluminum housing sturdier & safer
- Battery cells last for over 30 years!
- LiFePO4 battery cells used are thermally stable and can't ignite!
- Battery Management System (BMS) leads in capacity retention – it takes 3.5 years for the battery to lose all of its charge.
- Designed to be placed inside the home, but can also be used for VanLife or TinyHomes.
- Install anywhere – independence from solar system.
- No Cobalt used in our Batteries! No Cobalt mining for our products!

Forget about selling electricity back to utilities, they will not thank you for it.

Instead, produce just enough for yourself and family.

ON GRID - DAY TIME

On grid solar system during the day is connected to the power grid. The energy produced by the solar panels can be used immediately in the household, and the excess energy is stored in batteries.

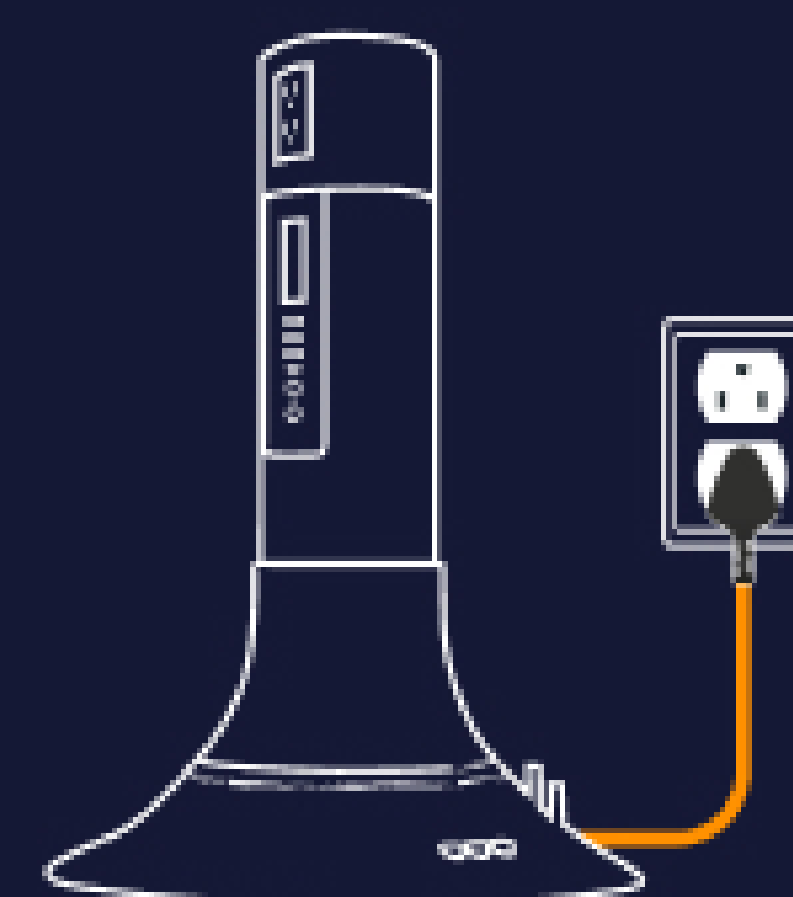

2000W Solar Kit

Supplements up to **2000W** of power you would purchase from the utility

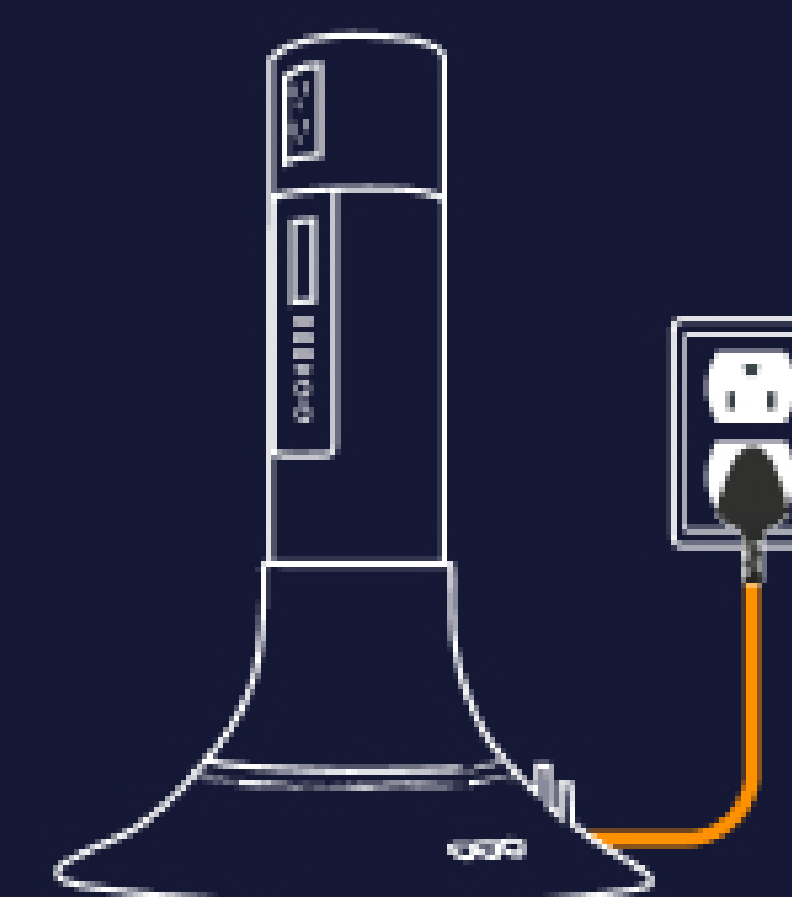

2kWh Battery Kit

Supplements up to **800W** of power you would purchase from the utility

1kWh
(400W)

1kWh
(400W)

Combined
= 2800 Watt
of output!

**The batteries operate within a UPS system.
It ensures that critical appliances remain
operational even during electricity disruptions.*

2800W

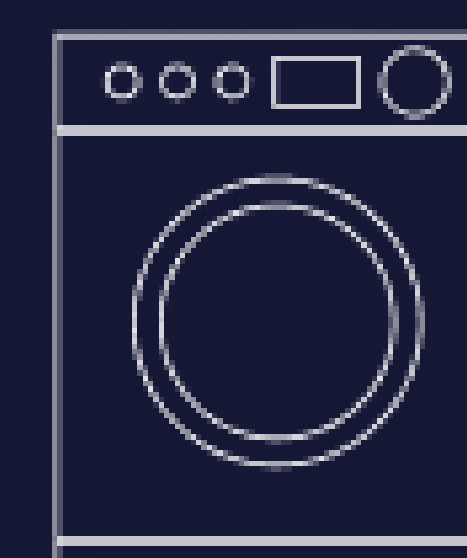

of output substitute **up to 50%** of power needed by 240V appliances

Electric Stove/Oven
3000W of power needed

5 Ton AC Unit
3000W of power needed

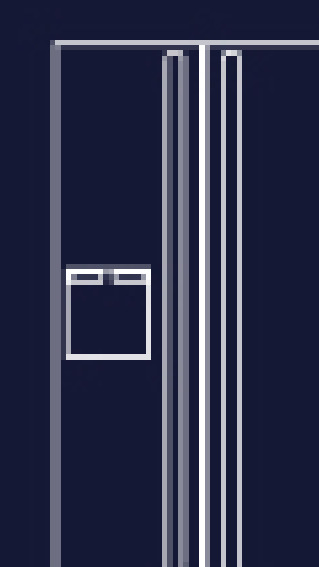

Washing Machine
1500W of power needed

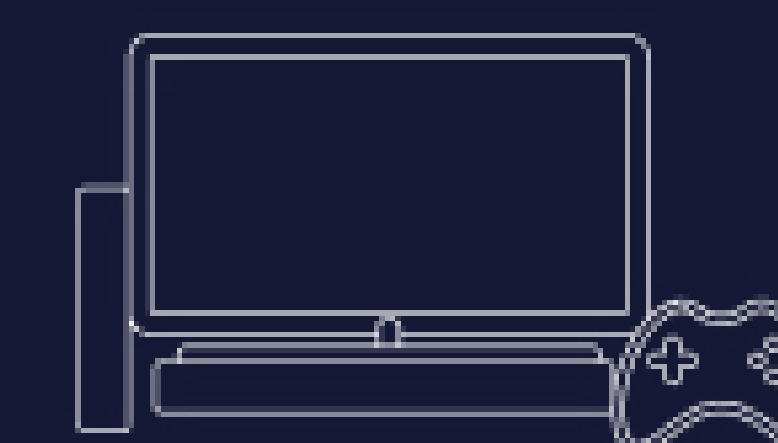

Security Systems
200W of power needed

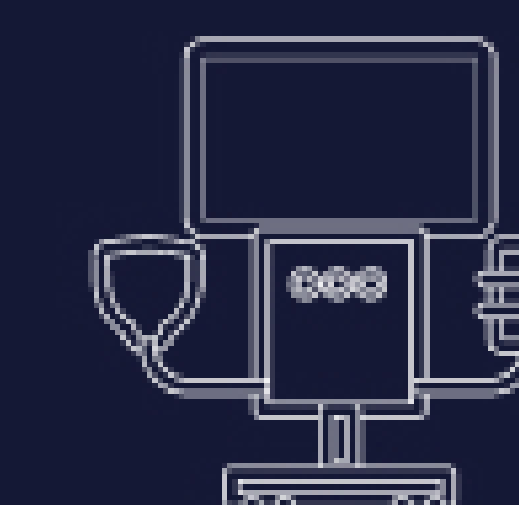

House Lighting
150W of power needed

Fridge/Freezer
150W of power needed

TV/Router/Games
200W of power needed

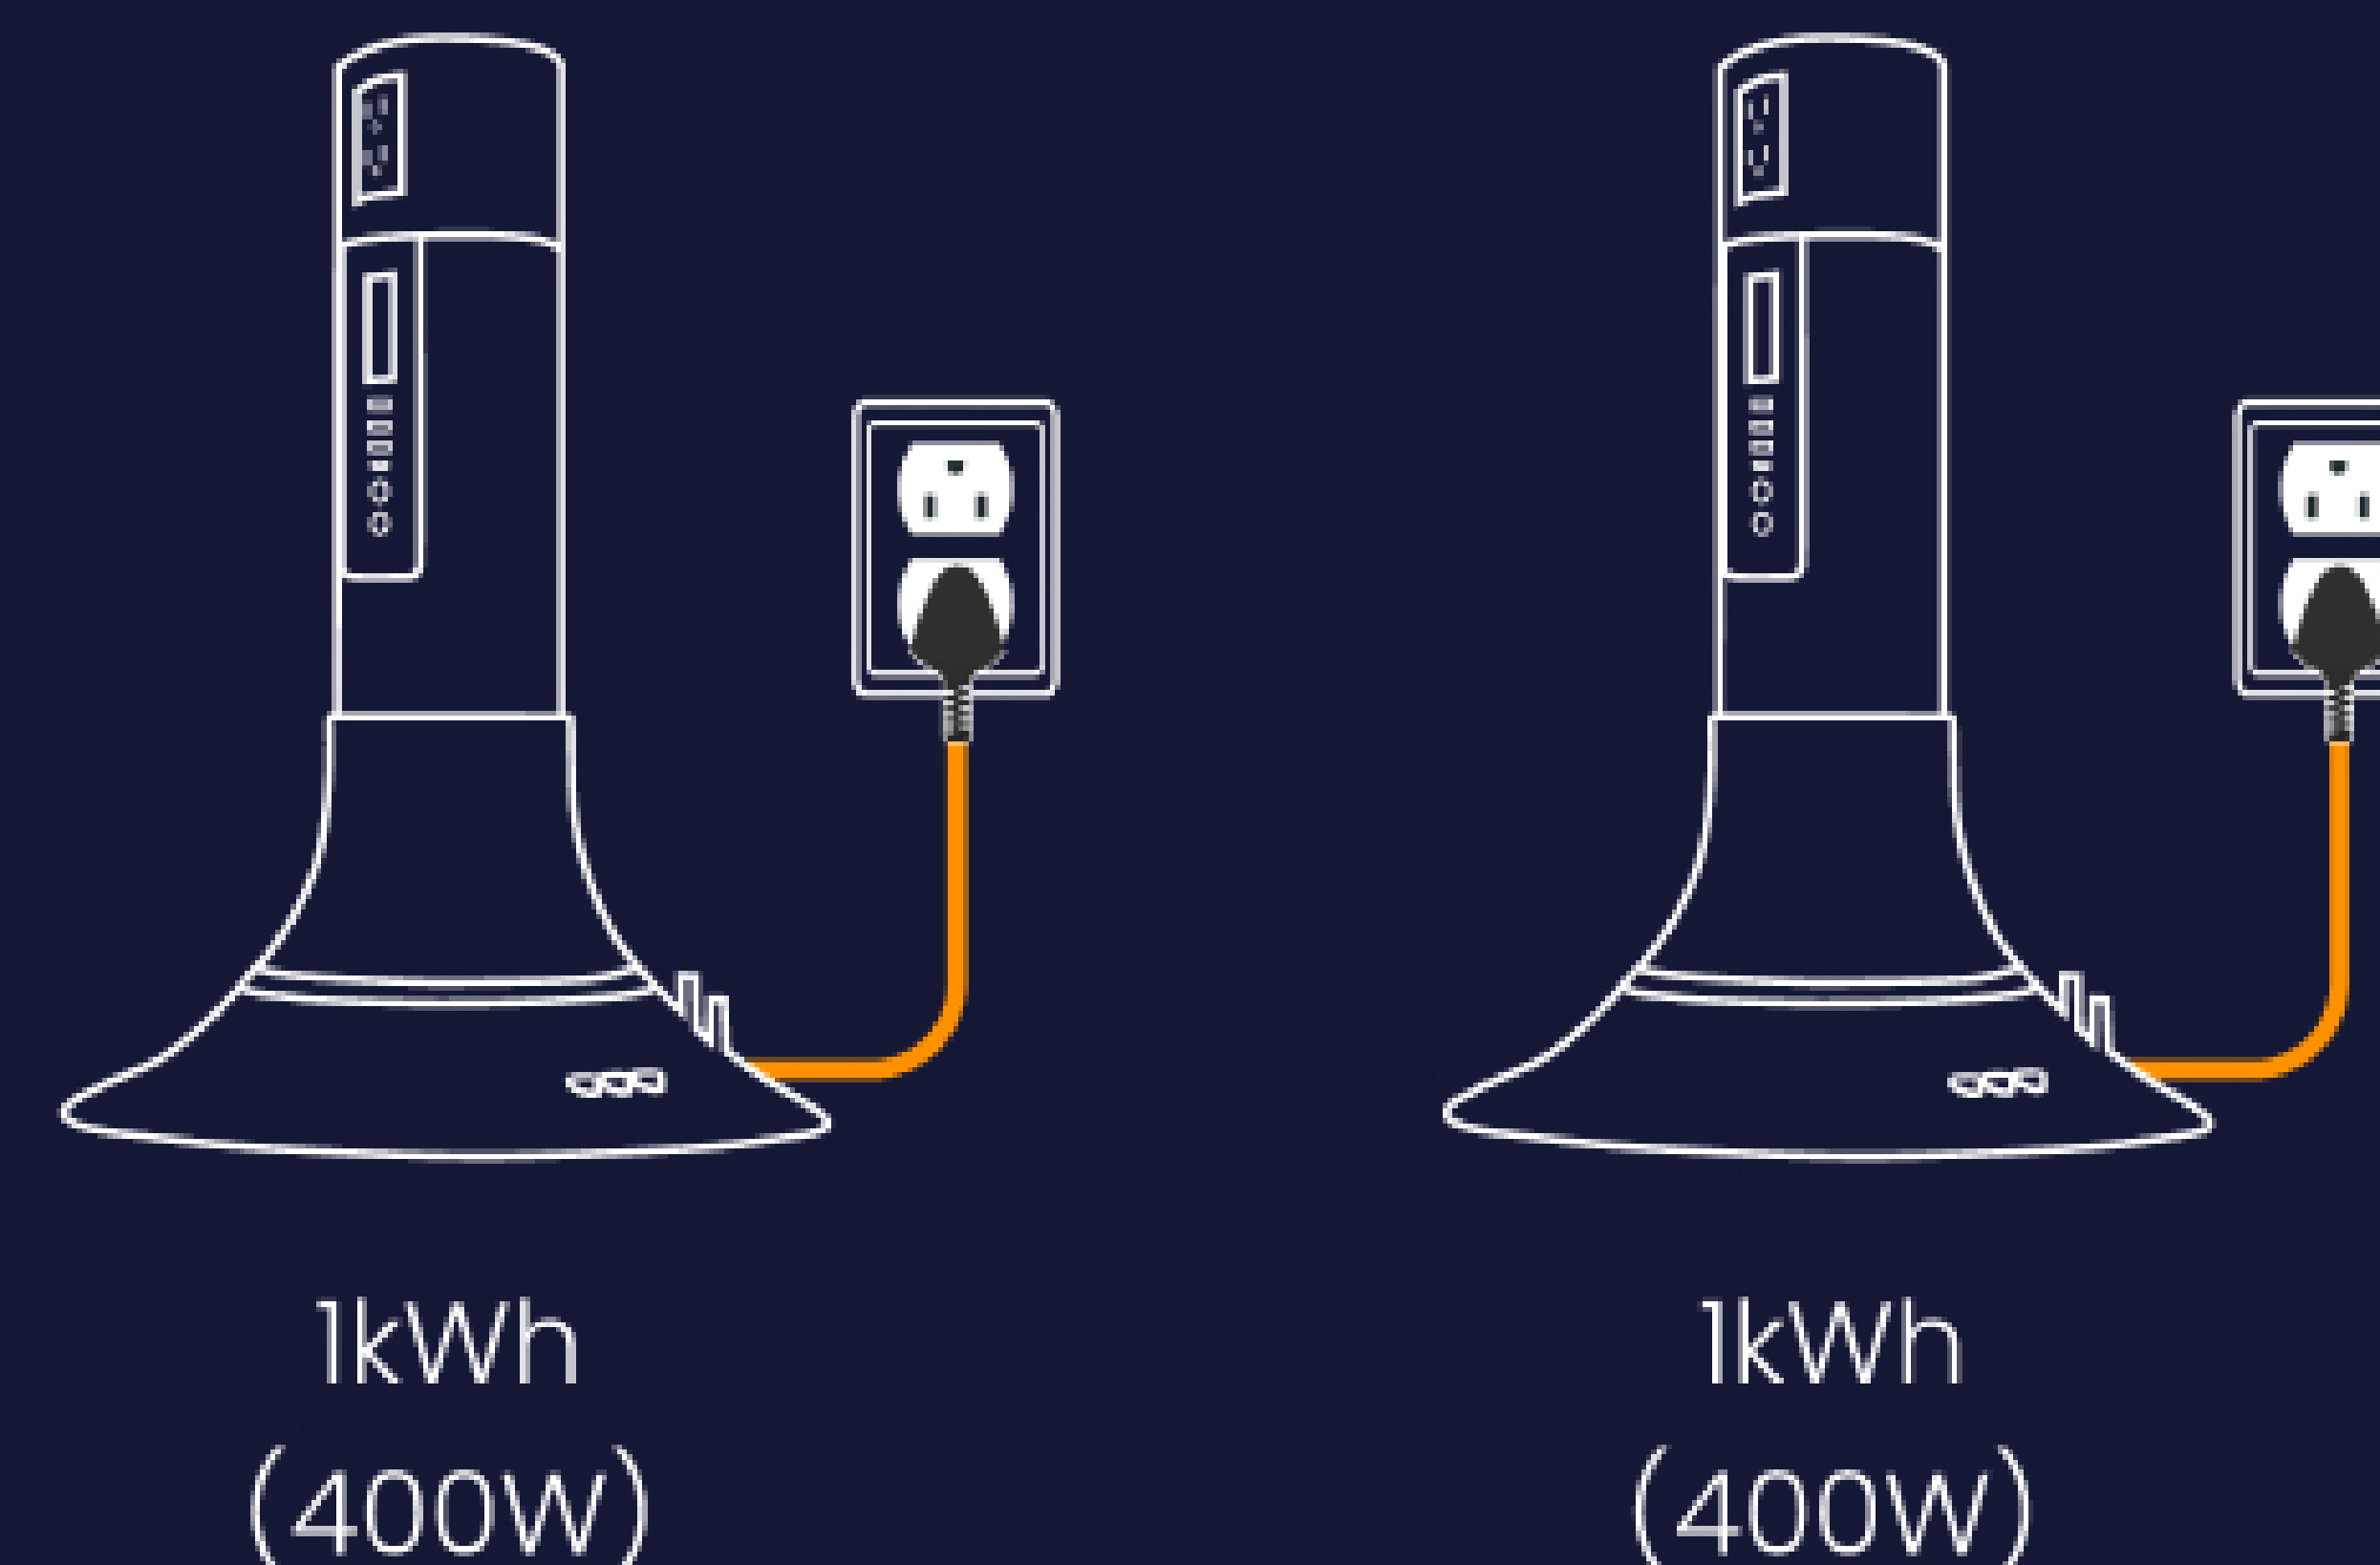

Patient Monitor
200W of power needed

ON GRID - NIGHT TIME

On grid solar system during the night is not connected to the power grid. The energy produced by the solar panels, which was stored in batteries during the day powers your home through the batteries at night.

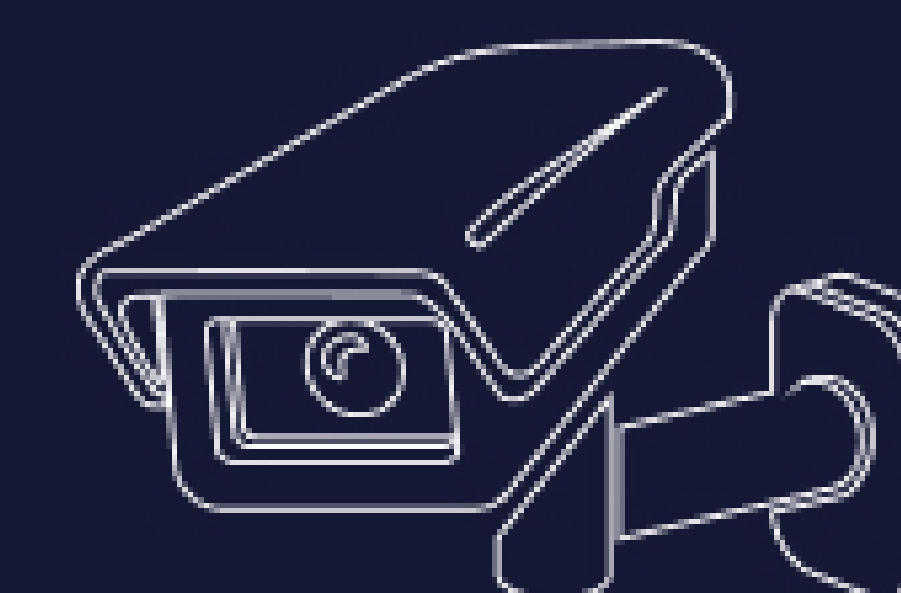

2kWh Battery Kit

Supplements up to 800W of power you would purchase from the utility

CPAP Machines

60W needed
20h runtime on full charge

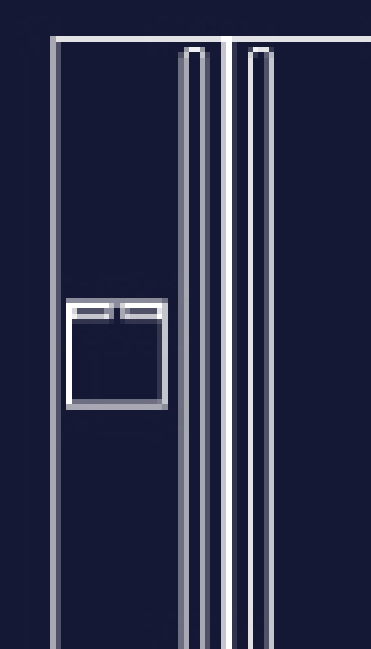

Security Systems

200W of power needed

House Lighting

150W of power needed

Fridge/Freezer

150W of power needed
30h runtime on Batteries

TV/Router/Games

200W of power needed
10h runtime on Batteries

800W

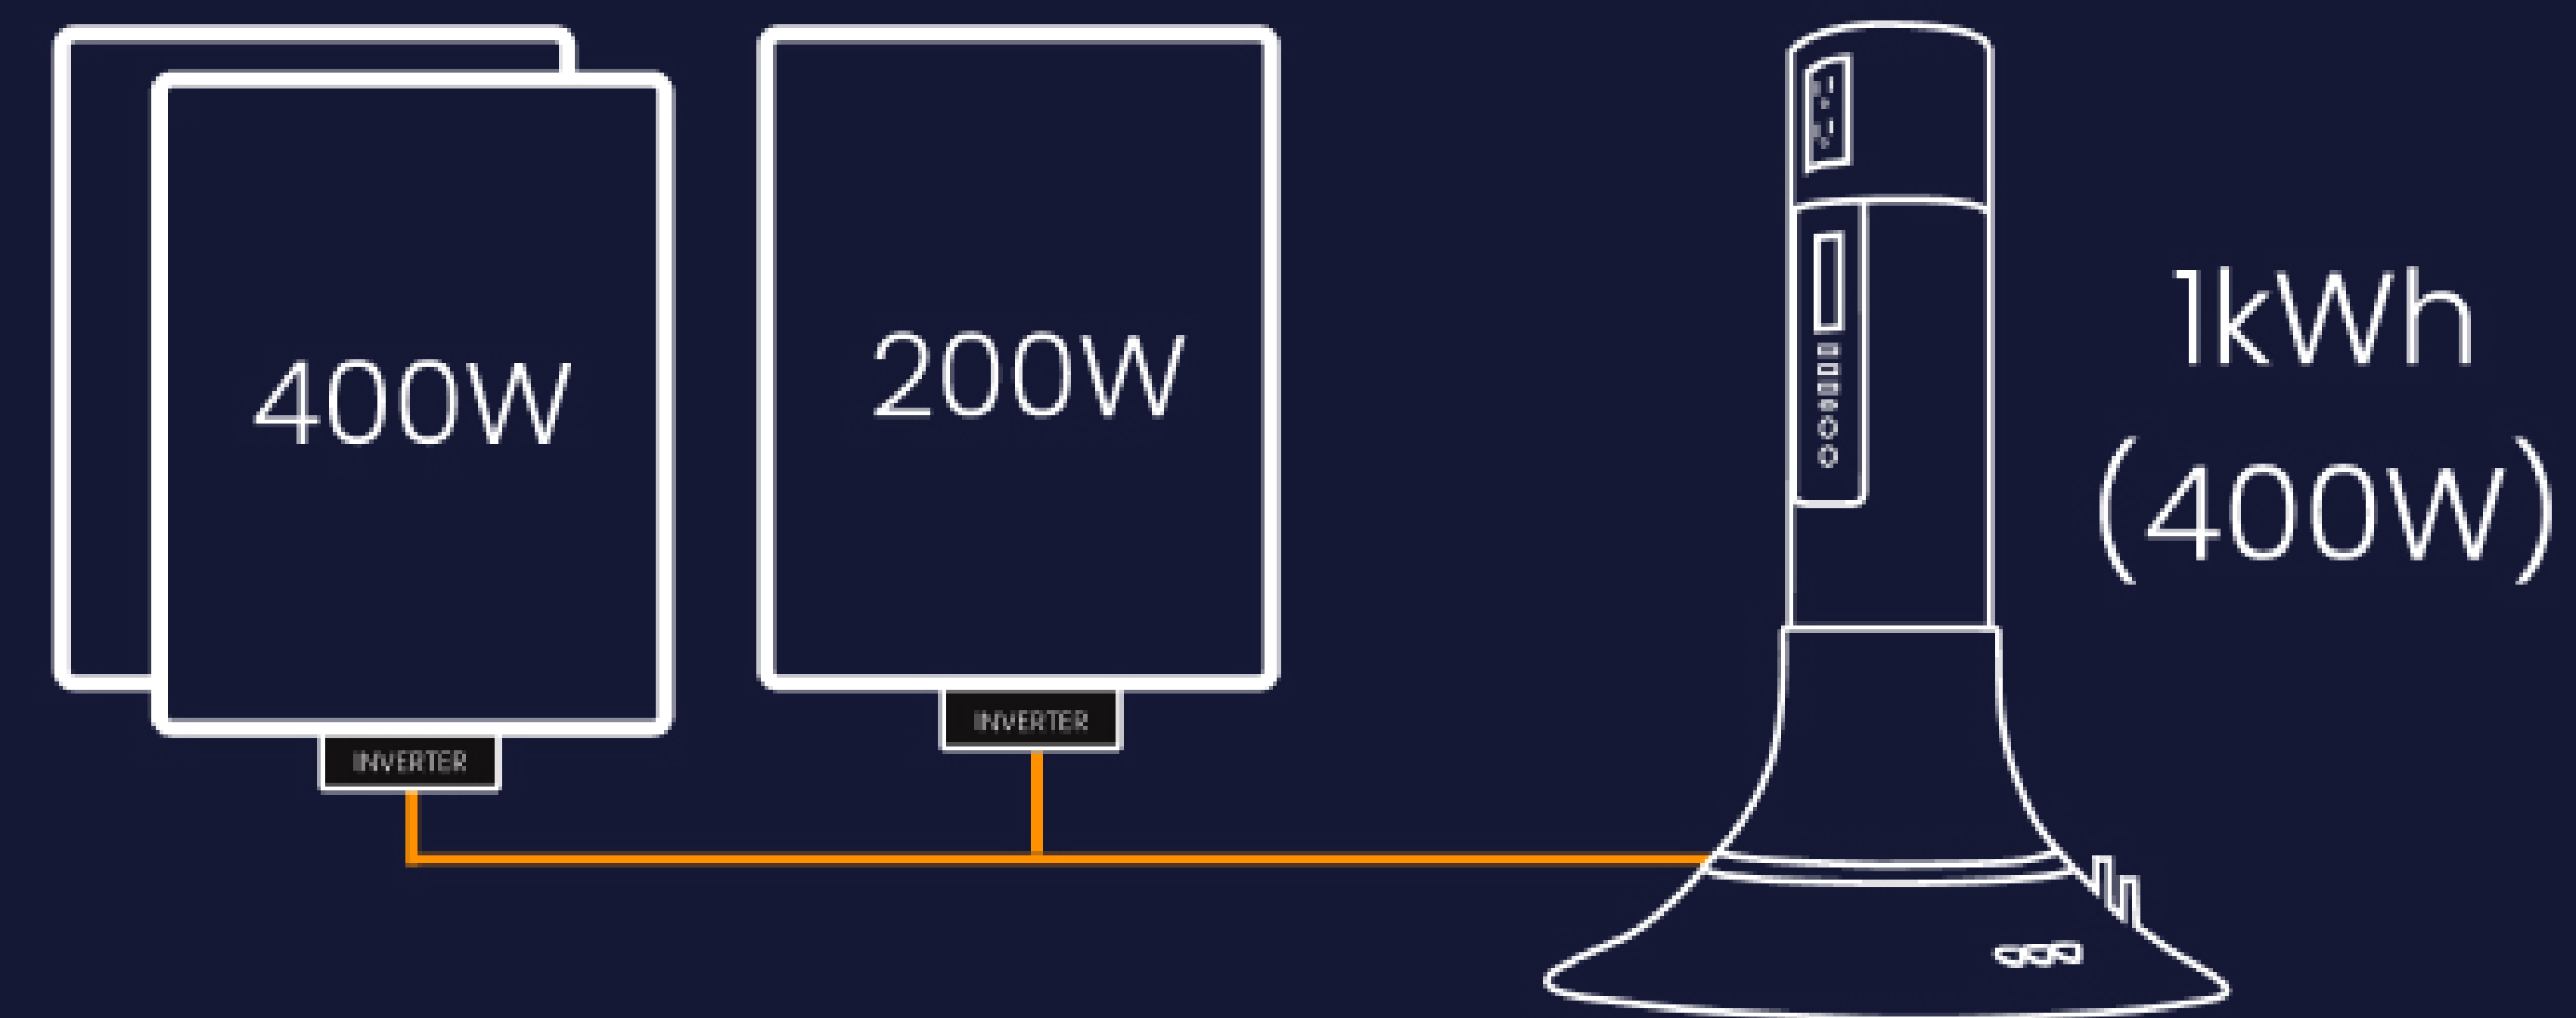

of output substitute **up to 100%** offset an array of appliances

OFF GRID

An off-grid solar system is a stand-alone power system that operates independently from the public electricity grid.

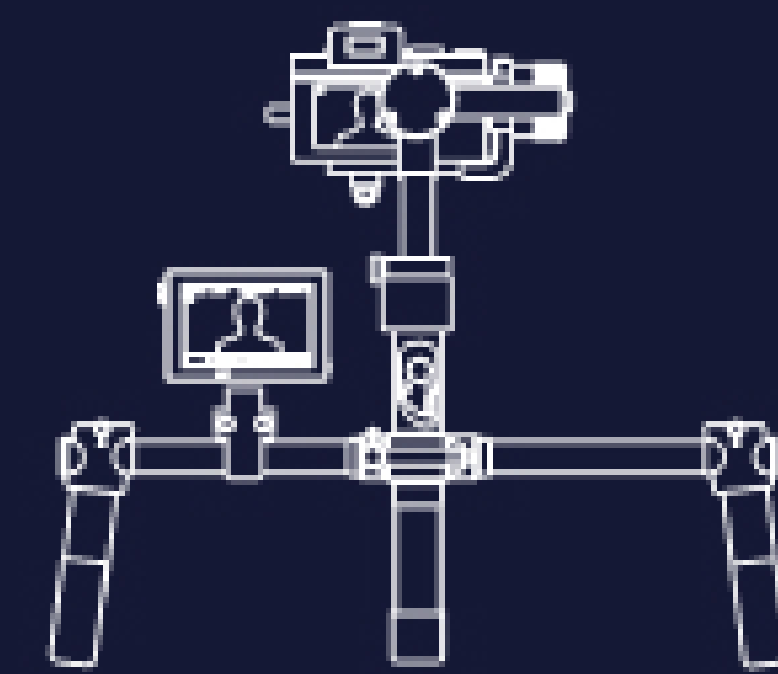

1kWh Battery powered by 600W Solar via DC port

600 W output is located on the top of the battery (1200 W peak)

Charge your Electronics on the Go!

Keep some appliances on when the power goes out or power your outdoor adventures

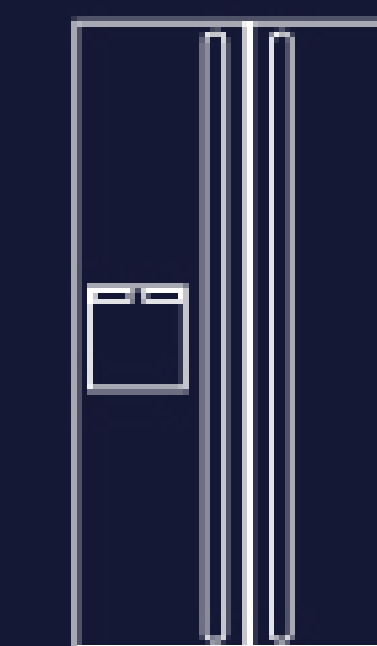

Camera/Gimbal

200W needed
4h runtime on full charge

Drone

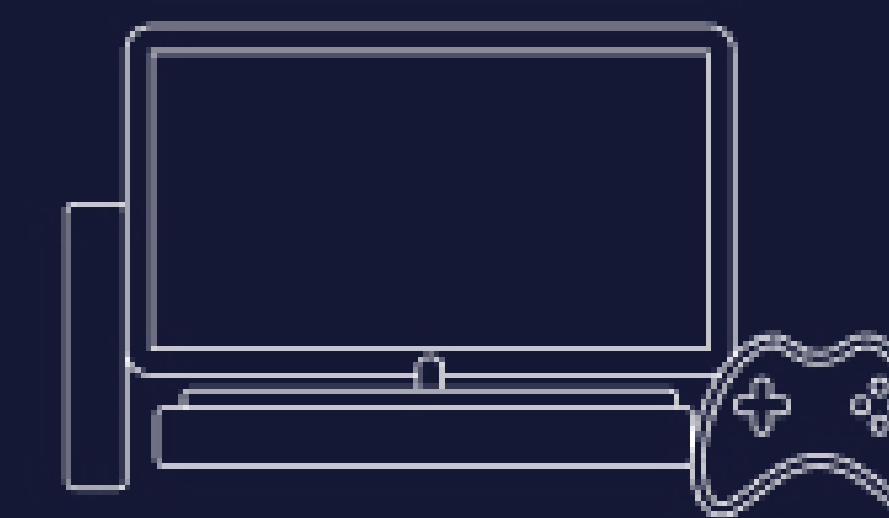

200W needed
4h runtime on full charge

Fridge/Freezer

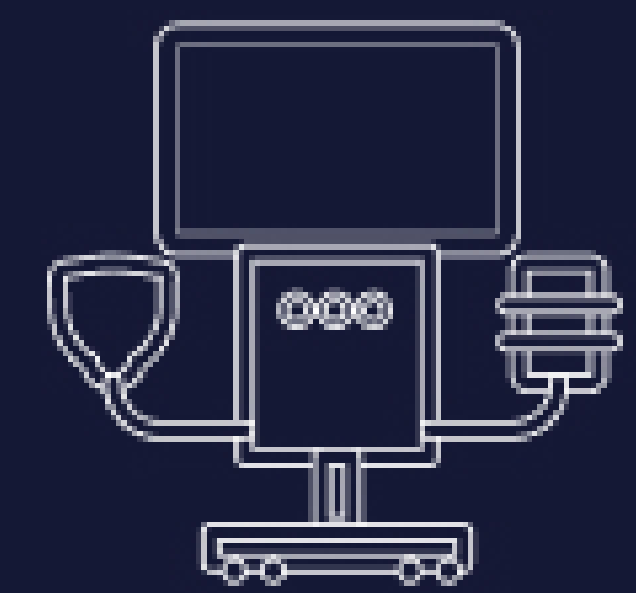

150W needed
10h runtime on full charge

OR

TV/Router/Games

200W needed
5h runtime on full charge

Patient Monitor

200W needed
10h runtime on full charge

OR

CPAP Machines

60W needed
20h runtime on full charge
